

1. Write a program in C to read 11 number from the keyboard and multiply this number with your ID's last 4 digit. If the Multiplication result is less than 3275 then Print "Nature is Beautiful", if it is less than 5789 then Print "Today is Wednesday.", otherwise it will Print "Need to practice more!".
2. Write a program in C to read 13 numbers from the keyboard and each time it will multiply by your ID's last 4 digit and show the total multiplication as output. And check whether the multiplication result is EVEN or ODD. If EVEN then print "My ID is an EVEN Number.", and for ODD it will print "This is my University ID."
3. Write a program in C to read 19 numbers from the keyboard and find whether the number is EVEN or ODD and Find total Sum of all the EVEN numbers. If the Sum result is less than 2689 then Print "Happy Programming", if it is less than 3759 then Print "I love Programming.", otherwise it will Print "I have to practice more."
4. Write a program in C to read 09 numbers from the keyboard and find whether the number is EVEN or ODD. If EVEN then multiply the number with your ID's last 3 digit, then print the output and for ODD numbers, it will multiply by your SSC result and print the output.
5. Write a program in C to read 23 numbers from the keyboard and find whether the number is EVEN or ODD and Find the Multiplication of all the ODD numbers. And print the total SUM of all the Multiplication result. And for the EVEN numbers it will multiply by your 1st semesters CGPA result and print the output.
6. Write a program in C to read 34 number from the keyboard and check if the number is less than your ID's last 4 digit then Multiply the Number with Your ID' and Print the output, Otherwise, Add the number with your ID and Print the Output. And check whether the output is EVEN or ODD. If EVEN then print "Daffodil International University", otherwise print "Software Engineering Department."
7. Write a program in C to read 27 numbers from the keyboard and each time it will check whether the number is divided by 9 or not. If yes then Sum of all the numbers those are divided by 9 and check whether the Number is EVEN or ODD, otherwise Sum of all the ODD Numbers and print the result as output.

8. Write a program in C to read 12 numbers from the keyboard and find whether the number is Negative or Positive and Find Total Sum of the Positive numbers. If the result is more than 2689 then Print "I am Successful", if it is less than 589 then Print "I love Programming.", otherwise it will Print "I have to do practice more."
9. Write a program in C to read 06 numbers from the keyboard and find whether the number is Negative or Positive and Find Total Multiplication of the Negative numbers. If the result is more than -3267 then Print "Today is Saturday", if it is less than -649 then Print "I love my country.", otherwise it will Print "I love my family."
10. Write a program in C to read 12 numbers from the keyboard and find whether the number is Negative or Positive and Find total Multiplication of all the Negative and Positive numbers separately. If the total Multiplication of all the Negative numbers is less than -4554 then Print "Very large Negative Number", if it is less than -789 then Print "Number choice is good", otherwise it will print "Happy Programming".
11. Write a program in C to read 18 number from the keyboard and check whether the number is EVEN or ODD. From the EVEN numbers check whether the number is Negative or Positive. For the positive number it will multiply by Your ID's last 2 digit and print the result and for the Negative numbers it will print "Ohho! Sad."
12. Write a program in C to read 11 number from the keyboard and check if the number is greater than your ID then Multiply the Number with Your ID and Print the output, Otherwise, Add the number with your ID and check whether the result is EVEN or ODD. If EVEN then print "I love my Mother", otherwise print "I love my Father."
13. Write a program in C to read 12 numbers from the keyboard and each time the number is Subtract from your ID and show the total sum of all the Subtraction result. Also check whether the number is EVEN or ODD and Multiply all the ODD numbers and show the output. For EVEN numbers it will print "I am a student of SWE Department."

14. Write a program in C to read 06 numbers from the keyboard and find whether the number is Negative or Positive and Find Total Multiplication of the Negative numbers. If the result is more than -3267 then Print "Today is Saturday", if it is less than -649 then Print "I love my country.", otherwise it will Print "I love my family. And for the positive numbers it will directly multiply with your Age and print the result as output.
15. Write a C program to display and compute the sum and multiplication of 17 natural numbers that are given by user and show whether the outputs are EVEN or ODD. For the EVEN outputs it will print "Please do this program carefully.", otherwise it will print "Please check again."
16. Write a C program to display the sum and multiplication of 24 terms of ODD natural numbers. And find the sum of all the numbers. If the result is more than 3456 then Print "Great achievement", if it is less than 567 then Print "Try Try and Try.", otherwise it will Print "Need to go a long way."
17. Write a program in C to read 16 numbers from the keyboard and find whether the number is Negative or Positive and Find Total Sum of the Negative numbers. If the result is more than -3267 then Print "Canada is beautiful Country", if it is less than -649 then Print "I love my country.", otherwise it will Print "I love my family". And for the positive numbers it will directly multiply with your ID's last 2 digit and print the result as output.
18. Write a program in C to read 17 number from the keyboard and check if the number is greater than your ID then Multiply the Number with Your ID and Print the output, Otherwise, Add the number with your ID then check whether the Summation result is greater than 2590 or not. If yes then print "Need to practice more", otherwise print "Digital World."
19. Write a program in C to read 12 numbers from the keyboard and find whether the number is Negative or Positive and Find Total Sum of the Positive numbers. If the result is more than 2689 then Print "I am Successful", if it is less than 589 then Print "I love Programming.", otherwise it will Print "I have to do practice more."

20. Write a program in C to read 14 number from the keyboard and check whether the number is EVEN or ODD. From the EVEN numbers check whether the number is Negative or Positive and find Multiplication of all the EVEN numbers. and for the ODD numbers, multiply the number with the last 2 digit of your ID and print the Sum of all the Multiplication result as Output.
21. Write a program in C to read 13 numbers from the keyboard and find whether the number is EVEN or ODD and Find the Multiplication of all the ODD numbers and show the output and For the EVEN numbers, it will multiply with the last 4 digits of your ID and Show the output.
22. Write a program in C to read 07 number from the keyboard and multiply this number with your ID's last 2 digit and check whether the Multiplication result is EVEN or ODD. If the Multiplication result is EVEN then Print the total Sum of the Multiplication result, otherwise it will multiply with your Birth date and sum of all the multiplication and show as output.
23. Write a program in C to read 22 number from the keyboard and check whether the number is EVEN or ODD. From the ODD numbers check whether the number is Negative or Positive and find Multiplication of all the ODD numbers. and for the EVEN numbers, multiply the number with the last 2 digit of your ID and print the Sum of all the Multiplication result as Output.
24. Write a program in C to read 14 number from the keyboard and add this number with your ID's last 4 digit. If the Summation result is less than 1387 then check whether the result is EVEN or ODD, if the result is less than 1766 then print "I am a student of SWE Department.", otherwise it will multiply by your ID's last 3 digit. And print the result as Output.
25. Write a program in C to read 16 number from the keyboard and multiply this number with your ID's last 3 digit. If the Multiplication result is less than 5894 then check whether the result is EVEN or ODD, if the result is less than 1766 then check whether the number is Negative or Positive, otherwise it will add with your ID's last 2 digit. And print the result as Output.
